Recent Advances in Learning Automata

Studies in Computational Intelligence

Volume 754

Series editor

Janusz Kacprzyk, Polish Academy of Sciences, Warsaw, Poland
e-mail: kacprzyk@ibspan.waw.pl

The series “Studies in Computational Intelligence” (SCI) publishes new developments and advances in the various areas of computational intelligence—quickly and with a high quality. The intent is to cover the theory, applications, and design methods of computational intelligence, as embedded in the fields of engineering, computer science, physics and life sciences, as well as the methodologies behind them. The series contains monographs, lecture notes and edited volumes in computational intelligence spanning the areas of neural networks, connectionist systems, genetic algorithms, evolutionary computation, artificial intelligence, cellular automata, self-organizing systems, soft computing, fuzzy systems, and hybrid intelligent systems. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution, which enable both wide and rapid dissemination of research output.

Preface

This book is written for computer engineers, scientists, and students studying/working in reinforcement learning and artificial intelligence domains. The book collects recent advances in learning automaton theory as well as its applications in different computer science problems and domains. The book, in detail, describes the distributed learning automata and the cellular learning automata models for solving a variety of complex problems in wireless sensor networks, complex social networks, cognitive peer-to-peer networks, and adaptive Petri nets. Validation of the given learning automata-based methodologies is provided through extensive computer simulations. In addition, the book presents detailed mathematical and theoretical aspects of recent developments of cellular learning automata in real-world problems. The mathematical level in all chapters is well-suited within the grasp of the scientists as well as the graduate students from the engineering and computer science streams. The reader is encouraged to have basic understanding of probability, stochastic processes, and related mathematical analyses.

This book consists of six chapters dedicated toward using recent models of learning automata for computer science applications. Chapter 1 provides the necessary background about learning automata theory and distributed learning automata. Chapter 2 gives a brief introduction about recent cellular learning automata models including irregular cellular learning automata and dynamic cellular learning automata models. Chapter 3 introduces recent applications of learning automata for wireless sensor networks. Chapter 4 is devoted to applications of learning automata in cognitive peer-to-peer networks. Chapter 5 discusses about the applications of learning automata for social network analyses when the underlying graph model is assumed to be stochastic. Finally, Chap. 6 provides new models of adaptive Petri nets based on learning automata.

The authors would like to thank Dr. Thomas Ditzinger, Springer, Executive Editor, Interdisciplinary and Applied Sciences and Engineering and Mr. Ramamoorthy Rajangam, Project Coordinator, Books Production, Springer Verlag, Heidelberg, for the editorial assistance and excellent cooperative collaboration to produce this

important scientific work. We hope that readers will share our pleasure to present this book on recent advances in learning automata and will find it useful in their careers.

Acknowledgements

We are grateful to many people who have helped us during the past few years, who have contributed to work presented here, and who have offered critical reviews of prior publications. We thank Springer for their assistance in publishing the book. We are also grateful to our academic supervisor, our family, our parents, and all our friends for their love and support.

Contents

Part I Models

1 Learning Automata Theory	3
1.1 Learning Automata	3
1.1.1 Fixed-Structure Learning Automata.	6
1.1.2 Variable-Structure Learning Automata (VSLA)	6
1.1.3 Learning Automata with Variable Number of Actions	7
1.1.4 Estimator Algorithms	7
1.1.5 Pursuit Algorithms	8
1.1.6 Continuous Action-Set Learning Automata	9
1.2 Interconnected Learning Automata.	9
1.2.1 Hierarchical Structure Learning Automata	10
1.2.2 Multi-Level Game of Learning Automata	12
1.2.3 Network of Learning Automata	12
1.2.4 Distributed Learning Automata (DLA)	13
1.2.5 Extended Distributed Learning Automata (<i>e</i> DLA)	15
1.3 Cellular Learning Automata	16
1.3.1 CLA-EC: CLA-Based Evolutionary Computing	18
1.4 Applications of Learning Automata	19
2 Cellular Learning Automata	21
2.1 Introduction	21
2.2 Irregular Cellular Learning Automata.	22
2.2.1 Definitions and Notations	24
2.2.2 Behavior of ICLA	26
2.2.3 Expediency of ICLA	37
2.3 Dynamic Models of Cellular Learning Automata	39
2.3.1 Dynamic Irregular Cellular Learning Automata	40
2.3.2 Heterogeneous Dynamic Irregular Cellular Learning Automata	52

2.3.3	Closed Asynchronous Dynamic Cellular Learning Automata	68
2.3.4	Closed Asynchronous Dynamic Cellular Learning Automata with Varying Number of LAs in Each Cell	84
2.3.5	Norms of Behavior	85
2.4	Conclusion	87
Part II Recent Applications		
3	Learning Automata for Wireless Sensor Networks	91
3.1	Introduction	91
3.2	Data Aggregation	92
3.2.1	Problem Statement	93
3.2.2	The Algorithm	95
3.2.3	Experimental Results	101
3.3	Clustering	105
3.3.1	The Algorithm	107
3.3.2	Analytical Study	111
3.3.3	Experimental Results	119
3.4	Area Coverage	122
3.4.1	CLA-DS: A Cellular Learning Automata-Based Deployment Strategy	123
3.4.2	CLA-EDS: An Extension to CLA-DS for Providing <i>K</i> -Coverage	147
3.5	Point Coverage	170
3.5.1	SALA: A Learning Automata-Based Scheduling Solution to the Dynamic Point Coverage Problem	172
3.5.2	SACLA: A Cellular Learning Automata-Based Algorithm for Dynamic Point Coverage Problem	197
3.6	Conclusion	218
4	Learning Automata for Cognitive Peer-to-Peer Networks	221
4.1	Introduction	221
4.2	A Cognitive Engine for Solving Topology Mismatch Problem Based on Schelling Segregation Model	225
4.2.1	Preliminaries	225
4.2.2	An Approach Based on CADCLA for Designing Cognitive Engines and Its Application to Solve Topology Mismatch Problem	228
4.2.3	Experimental Results	237
4.3	A Cognitive Engine for Solving Super-Peer Selection Problem Based on Fungal Growth Model	244
4.3.1	Preliminaries	245

4.3.2	Proposed Algorithm: X-NET	247
4.3.3	Experimental Results	252
4.4	A Cognitive Engine for Solving Topology Mismatch Problem Based on Voronoi Diagrams	261
4.4.1	Preliminaries	262
4.4.2	Proposed Algorithm: <i>xOverlay</i>	265
4.4.3	Experimental Results	273
4.5	Conclusion and Future Work	278
5	Learning Automata for Complex Social Networks	279
5.1	Complex Social Networks	279
5.1.1	Stochastic Graphs as a Graph Model for Complex Social Networks	280
5.2	Stochastic Graph Problems	282
5.2.1	Maximum Clique Problem in Stochastic Graphs	283
5.2.2	Minimum Vertex Covering in Stochastic Graphs	290
5.3	Social Network Analysis	298
5.3.1	Network Centralities and Measures for Social Network Analysis	300
5.3.2	LA-Based Algorithm for Computing Network Centralities and Measures in Stochastic Social Networks	303
5.3.3	Experiments	306
5.4	Network Sampling	311
5.4.1	LA-Based Algorithms for Network Sampling in Deterministic Graphs	311
5.4.2	LA-Based Algorithms for Network Sampling Algorithms in Stochastic Graphs	319
5.5	Community Detection	326
5.5.1	LA-Based Algorithm for Community Detection	327
5.5.2	Experiments	330
5.6	Conclusion	333
6	Adaptive Petri Net Based on Learning Automata	335
6.1	Introduction	335
6.2	Petri Nets	337
6.2.1	Definitions and Notations	339
6.2.2	Controlling Mechanisms in Petri Nets	346
6.2.3	Time in Petri Nets	348
6.2.4	Adaptive Petri Nets	352
6.2.5	Applications of Petri Nets	353
6.3	Hybrid Machines Based on LAs and PNs	354
6.3.1	APN-LA: Adaptive PN Based on LA	354
6.3.2	ASPN-LA: Generalization of APN-LA	361

6.3.3	APN-ICLA: Adaptive PN Based on Irregular Cellular LA	363
6.3.4	CAPN-LA: Cellular Adaptive PN Based on LA	366
6.3.5	Concluding Remarks	376
6.4	Priority Assignment Application	377
6.4.1	Priority Mechanisms	378
6.4.2	ASPN-LA and Priority Assignment	380
6.4.3	Simulation Results	394
6.5	Graph Applications	404
6.5.1	The Shortest Path Problem in Stochastic Graphs: Application of ASPN-LA	405
6.5.2	Vertex Coloring Problem: Application of CAPN-LA	421
6.6	Conclusion and Future Work	436
7	Summary and Future Directions	437
	Bibliography	439

About the Authors

Alireza Rezvanian was born in Hamedan, Iran, in 1984. He received his B.Sc. from Bu-Ali Sina University of Hamedan, Iran, in 2007, M.Sc. in Computer Engineering with honors from Islamic Azad University of Qazvin, Iran, in 2010, and Ph.D. in Computer Engineering at the Computer Engineering and Information Technology Department from Amirkabir University of Technology (Tehran Polytechnic), Tehran, Iran, in 2016. Currently, he works as a researcher in School of Computer Science, Institute for Research in Fundamental Sciences (IPM), Tehran, Iran. Prior to the current position, he joined the Department of Computer Engineering and Information Technology at Hamedan University of Technology, Hamedan, Iran as a lecturer. He has authored or coauthored more than 70 research publications in reputable peer-reviewed journals and conferences including IEEE, Elsevier, Springer, Wiley and Taylor & Francis. He has been Guest Editor of special Issue on new applications of learning automata-based techniques in real-world environments for Journal of Computational Science (Elsevier). He is an associate editor of the Human-centric Computing and Information Sciences (Springer). His research activities include soft computing, evolutionary algorithms, complex social networks, and learning automata.

Ali Mohammad Saghiri received his B. Sc. and M. Sc. in computer engineering in Iran, in 2008 and 2010, respectively. He received Ph.D. in computer engineering at the Computer Engineering and Information Technology Department from Amirkabir University of Technology (Tehran Polytechnic), Tehran, Iran, in 2017. His research interests include peer-to-peer networks, distributed systems, artificial intelligence, learning automata, reinforcement learning, parallel algorithms, and soft computing.

S. Mehdi Vahidipour received his B.Sc. and M.Sc. in computer engineering in Iran, in 2000 and 2003, respectively. He received Ph.D. in computer engineering at the Computer Engineering and Information Technology Department from Amirkabir University of Technology (Tehran Polytechnic), Tehran, Iran, in 2016. Currently, he is an Assistant Professor in Electrical and Computer Engineering department, University of Kashan. His research interests include distributed artificial intelligence, learning automata, and Adaptive Petri nets.

Mehdi Esnaashari received his B.S., M.S., and the Ph.D. in computer engineering, all from the Amirkabir University of Technology, Tehran, Iran, in 2002, 2005, and 2011, respectively. Prior to his current position, he was an Assistant Professor with Iran Telecommunications Research Center, Tehran. He is currently an Assistant Professor with faculty of computer engineering, K. N. Toosi University of Technology, Tehran, Iran. His current research interests include computer networks, learning systems, learning automata, soft computing, and information retrieval.

Mohammad Reza Meybodi received B.S. and M.S. in Economics from the Shahid Beheshti University in Iran, in 1973 and 1977, respectively. He also received M.S. and Ph.D. from the Oklahoma University, USA, in 1980 and 1983, respectively, in Computer Science. Currently, he is a Full Professor in Computer Engineering Department, Amirkabir University of Technology, Tehran, Iran. Prior to current position, he worked from 1983 to 1985 as an Assistant Professor at the Western Michigan University, and from 1985 to 1991 as an Associate Professor at the Ohio University, USA. His current research interests include, learning systems, cloud computing, soft computing, and social networks.

Abstract

Learning automaton (LA) as a promising field of artificial intelligence is a self-adaptive decision-making device that interacts with an unknown stochastic environment and progressively is able to find the optimal action even provided with probabilistic wrong hints. LA has made a significant impact in many areas of computer science and engineering problems. In the past decade, a wide range of learning automata theories, models, and paradigms have been published by researchers in vast areas of computer science domain such as resource allocation, pattern recognition, image processing, task scheduling, data mining, computer networks, communication networks, distributed adaptive systems, cognitive networks, vehicular sensor networks, grid computing, cloud computing, adaptive Perti-nets, complex social networks, optimization, and so on. Learning automata are extremely suitable for modeling, learning, controlling, and solving real-world problems, especially when the information is incomplete; that is, when the environment is noisy or has a high degree of uncertainty. This book is intended to collect recent advances in learning automata including research results that address key issues and topics related to learning automata theories, architecture, models, algorithms, and their applications.
